Someone maybe feel sad and depressed for the twice failure, The Estruturit provide you with the biggest facility for the HP HPE0-V19 exam.

NEW QUESTION: 1You work as the developer in an IT company. Recently your company has a big customer. The customer runs a large supermarket chain. You're appointed to provide technical support for the customer. Now according to the customer requirement, you are changing the security settings of a file named MyData.xml. You have to keep the existing inherited access rules. What's more, the access rules are not allowed to inherit changes in the future. You must ensure this. In the options below, which code segment should you use?**A.**

`FileSecurity security = new FileSecurity();security.SetAccessRuleProtection(true, true);File.SetAccessControl("mydata.xml", security);`**B.** `FileSecurity security = File.GetAccessControl("mydata.xml");security.SetAuditRuleProtection(true, true);File.SetAccessControl("mydata.xml", security);`**C.** `FileSecurity security = File.GetAccessControl("mydata.xml");security.SetAccessRuleProtection(true, true);`**D.** `FileSecurity security = new FileSecurity("mydata.xml", AccessControlSections.All);security.SetAccessRuleProtection(true, true);File.SetAccessControl("mydata.xml", security);`**Answer: D**

NEW QUESTION: 2**HOTSPOT**You are the Office 365 administrator for your company's Microsoft Exchange Online environment. The company recently subscribed to the Office 365 Enterprise E1 plan.The company wants to filter email messages based on the following criteria:*Reverse DNS lookup*Sender open proxy test*HELO/EHLO analysis*Analysis of spam confidence level (SCL) ratings on email messages from a specific sender You need to filter all email messages. How should you complete the relevant Windows PowerShell script? To answer, select the appropriate command segment from each list in the answer are a.**Answer:** Explanation:Sender reputation is part of the Exchange anti-spam functionality that blocks messages according to many characteristics of the sender. Sender reputation relies on persisted data about the sender to determine what action, if any, to take on an inbound message. The Protocol Analysis agent is the underlying agent for sender reputation functionality.We use the Set-SenderReputationConfig cmdlet to enable filtering based on sender reputation analysis. In this question, it is enabled for both external email and internal email.References: [https://technet.microsoft.com/en-us/library/bb124512\(v=exchg.150\).aspx](https://technet.microsoft.com/en-us/library/bb124512(v=exchg.150).aspx)

NEW QUESTION: 3**A.** Option **B.** Option **C.** Option **D****Answer: B**Explanation:* Scenario: Predictive Routing:/ An Azure solution must be used for prediction systems./ Predictive analytics must be published as a web service and accessible by using theREST API.* Microsoft Azure Machine Learning Studio is a collaborative visual development environment that enables you to build, test, and deploy predictive analytics solutions that operate on your data. The Machine Learning service and development environment is cloud-based, provides compute resource and memory flexibility, and eliminates setup and installation concerns because you work through your web browser.Reference: What is Azure Machine Learning Studio? <https://azure.microsoft.com/en-us/documentation/articles/machine-learning-what-is-mlstudi>

NEW QUESTION: 4BackgroundYou are managing a multi-tenant environment hosted within Microsoft Azure. All changes to the database are pushed to a template database which is stored as a Microsoft Azure SQL database named contosoTemplate which is stored on the virtual SQL Server named SQL1. You also have a virtual SQL Server named SQL2.You are provisioning an Azure SQL Database instance named DB1. No Azure firewall rules have been created.You plan to deploy the following databases to an elastic pool: EDB2, EDB3, EDB4, EDB5, and EDB6. All of the databases in the pool have the same peak usage period.You migrate a SQL Server instance named srvi to an Azure DS-13 series virtual machine (VM). The VM has two premium disks that are allocated as a storage pool.You plan to deploy a new Azure SQL Database named DB7 to support an application for your Human Resources (HR) department.You should prevent users that are not administrators from viewing sensitive data that is stored in DB7. You should accomplish this without any code changes to the various applications that will be reading the data.Corporate goals for data masking require the following formats:You need to implement dynamic data masking for each field type.How should you complete the Transact-SQL statement? To answer, drag the appropriate Transact-SQL segments to the correct locations. Each Transact-SQL segment may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.**Answer:** Explanation:Explanation Box 1: ADD MASKED WITH(FUNCTION = 'email()')The email masking method exposes the first letter of an email address and the constant suffix ".com", in the form of an email address. . [\[email protected\]](#).This default behavior is what we want.Example definition syntax: Email varchar(100) MASKED WITH (FUNCTION = 'email()') NULL Box 2: ADD MASKED WITH(FUNCTION = 'partial(2,"XX-XX-XX",2) The custom masking method which exposes the first and last letters and adds a custom padding string in the middle. Syntax: prefix,[padding],suffix References: <https://docs.microsoft.com/en-us/sql/relational-databases/security/dynamic-data-masking?view=sql-server-2017>
