A. IDS is blocking RADIUS**B.** Username is misspelled in the device configuration file**C.** Shared secret key is mismatched**D.** Group policy has not propagated to the device**Answer: C**
Explanation:AAA through RADIUS uses a Server Secret Key (a shared secret key). A secret key mismatch could cause login problems.Authentication, authorization, and accounting (AAA) allows a network to have a single repository of user credentials. A network administrator can then, for example, supply the same credentials to log in to various network devices (for example, routers and switches).RADIUS and TACACS+ are protocols commonly used to communicate with an AAA server.
