**NEW QUESTION: 4**An Elastic IP address (EIP) is a static IP address designed for dynamic cloud computing. With an EIP, you can mask the failure of an instance or software by rapidly remapping the address to another instance in your account. Your EIP is associated with your AWS account, not a particular EC2 instance, and it remains associated with your account until you choose to explicitly release it. By default how many EIPs is each AWS account limited to on a per region basis?**A.** 0**B.** 1**C.** 2**D.** Unlimited  
**Answer: A**  
Explanation:By default, all AWS accounts are limited to 5 Elastic IP addresses per region for each AWS account, because public (IPv4) Internet addresses are a scarce public resource. AWS strongly encourages you to use an EIP primarily for load balancing use cases, and use DNS hostnames for all other inter-node communication.If you feel your architecture warrants additional EIPs, you would need to complete the Amazon EC2Elastic IP Address Request Form and give reasons as to your need for additional addresses.Reference:
