NEW QUESTION: 1Although often confused with each other, global warming and ozone depletion are two separate problemsthreatening Earth's ecosystem today. Global warming is caused by the build-up of heat-trapping gases inthe atmosphere. It was dubbed the "greenhouse effect" because it is similar to a greenhouse in that thesun's rays are allowed into the greenhouse but the heat from these rays in unable to escape. Ozonedepletion, however, is the destruction of the ozone layer. Chemicals such as chlorofluorocarbons andmethyl bromide react with ozone, leaving a "hole" in the ozone layer that lets dangerous UV rays through.Both are serious threats to life on Earth. While the greenhouse effect maintains the appropriate temperature for life on Earth, problems are exacerbated when the quantity of greenhouse

gases in the Earth's atmosphere increases drastically. When this occurs, the amount of heat energy that is insulated within the Earth's atmosphere increases correspondingly and results in a rise in global temperature. An increase of a mere few degrees Celsius does not appear very threatening. However, numbers can be deceiving. When you consider that the Ice Age resulted from temperatures only slightly cooler than those today, it is obvious that even very subtle temperature changes can significantly impact global climate. Global warming threatens to desecrate the natural habitats of organisms on Earth and disturb the stability of our ecosystem. The climate changes that would result from global warming could trigger droughts, heatwaves, floods, and other extreme weather events. Like most other environmental problems, humans are the cause of global warming. The burning of fossil fuels is largely responsible for the increase in the concentration of carbon dioxide in the atmosphere. Every time someone drives a car or powers their home with energy derived from power plants that use coal, carbon dioxide is released into the atmosphere. The atmospheric concentrations of carbon dioxide and methane have risen meteorically since preindustrial times, mainly due to the contributions of factories, cars, and large-scale agriculture. Even if we immediately stopped emitting greenhouse gases, we would continue to see the effects of global warming for decades because of the damage we have already inflicted. Despite the pessimistic outlook, there are things that can be done to reduce global warming. Although the problem may seem overwhelming, individuals can make a positive difference in combating global warming. Simple things like driving less, using public transportation, and conserving electricity generated by combustion of fossil fuels can help reduce the emissions of greenhouse gases. It is important to realize that it is not too late to make a difference. If everyone does what they can to reduce their contributions of greenhouse gases to the atmosphere, the efforts of people around the world will act in concert to thwart the progression of global warming. If the effort is not made immediately, the delicate global ecosystem could be thrown irreversibly out of balance, and the future of life on Earth may be jeopardized. In the above passage the word thwart is used to mean? **A. hinder B. increase C. facilitate D. countenance E. baffle** **Answer: A** Explanation: You can infer the definition from the context clues "the progression of global warming."

NEW QUESTION: 2 회사는 은행을 사용하여 주간 급여를 처리합니다. 시간표 및 급여 조정 양식 (예: 시간당 요율 변경, 해지)이 완료되어 은행에 전달되어 수표 (수표)와 배포 보고서를 준비합니다. 급여 데이터 정확성을 최대한 보장하려면 **A. 총 임금은 수동으로 다시 계산해야 합니다. B. 수표 (수표)를 출력 보고서와 조정해야 합니다. C. 급여 보고서는 입력 양식과 비교되어야 합니다. D. 체크 (체크)는 입력 폼과 비교되어야 합니다.**

Answer: C Explanation: 설명: 입력이 회사에 의해 제공되고 출력이 은행에 의해 생성 될 때 데이터 정확도를 확인하는 가장 좋은 방법은 급여 보고서의 결과로 데이터 입력 (입력 양식)을 확인하는 것입니다. 따라서 급여 보고서를 입력 양식과 비교하는 것이 데이터 정확성을 확인하는 가장 좋은 방법입니다. 총 급여를 수동으로 다시 계산하는 것은 처리가 정확하지 그리고 입력의 데이터 정확도가 아닌지 만을 확인합니다. 수표 (수표)를 입력 양식과 비교하는 것은 검사 (수표)에 처리 된 정보가 있고 입력 양식에 입력 된 data가 있기 때문에 적합하지 않습니다. 출력 보고서로 수표 (수표)를 조정하면 출력 보고서별로 수표가 발행되었음을 확인할 수 있습니다.
