**NEW QUESTION: 2**You are developing code for an application that retrieves information about Microsoft .NET Framework assemblies. The following code segment is part of the application (line numbers are included for reference only): You need to insert code at line 04. The code must load the assembly. Once the assembly is loaded, the code must be able to read the assembly metadata, but the code must be denied access from executing code from the assembly. Which code segment should you insert at line 04?**A.** Assembly.LoadFrom(bytes);**B.** Assembly.Load(bytes);**C.** Assembly.ReflectionOnlyLoad(bytes);**D.** Assembly.ReflectionOnlyLoadFrom(bytes);**Answer: C**

Explanation: The Assembly.ReflectionOnlyLoad method (Byte[]) loads the assembly from a common object file format (COFF)-based image containing an emitted assembly. The assembly is loaded into the reflection-only context of the caller's application domain. You cannot execute code from an assembly loaded into the reflection-only context. Incorrect: Not A: The Assembly.ReflectionOnlyLoadFrom method (String) loads an assembly into the reflection-only context, given its path.
