NEW QUESTION: 3 A financial company has allocated an Amazon RDS MariaDB DB instance with large storage capacity to accommodate migration efforts. Post-migration, the company purged unwanted data from the instance. The company now wants to downsize storage to save money. The solution must have the least impact on production and near-zero downtime. Which solution would meet these requirements?
A. Create a snapshot of the old databases and restore the snapshot with the required storage
B. Create a new database using native backup and restore
C. Create a new read replica and make it the primary by terminating the existing primary
D. Create a new RDS DB instance with the required storage and move the databases from the old instance to the new instance using AWS DMS
Answer: A

NEW QUESTION: 4

ユーザーが自動スケーリングを使用してELBを構成しました。ユーザーは、AutoScalingの終了プロセスを一時的に中断しました。その結果、この期間中にアベイラビリティゾーンリバランスプロセス (AZRebalance) は何を引き起こす可能性がありますか?
A. AZリバランスにより、AutoScalingでインスタンスを起動または終了できるようになりました。
B. Auto

Scalingは、最大インスタンス数に達するまで、すべてのAZでインスタンスを起動し続けます。C. AZリバランシングにより、アベイラビリティゾーン内のインスタンスの数が最大サイズよりも高いままになる場合がありますD.

起動をアクティブにしたまま、終了プロセスを一時停止することはできません。Answer: C

Explanation:Auto Scaling performs various processes, such as Launch, Terminate, and Availability Zone Rebalance (AZRebalance). The AZRebalance process type seeks to maintain a balanced number of instances across Availability Zones within a region. If the user suspends the Terminate process, the AZRebalance process can cause the Auto Scaling group to grow up to ten percent larger than the maximum size. This is because Auto Scaling allows groups to temporarily grow larger than the maximum size during rebalancing activities. If Auto Scaling cannot terminate instances, the Auto Scaling group could remain up to ten percent larger than the maximum size until the user resumes the Terminate process type.Reference:
