**NEW QUESTION: 3**One of the most consistently reported software security vulnerabilities that leads to major exploits is:**A.** Attack surface decrease.**B.** Inadequate network hardening.**C.** Poor input validation.**D.** Lack of malware detection.**Answer: C****Explanation:**Section: Application, Data and Host Security**Explanation/Reference:****Explanation:**D: With coding there are standards that should be observed. Of these standards the most fundamental is input validation. Attacks such as SQL injection depend on unfiltered input being sent through a web application. This makes for a software vulnerability that can be exploited. There are two primary ways to do input validation: client-side validation and server-side validation. Thus, with poor input validation you increase your risk with regard to exposure to major software exploits.
