NEW QUESTION: 2What is the structure of a JSON web token?**A. header and payloadB. three parts separated by dots: header payload, and signatureC. payload and signatureD. three parts separated by dots: version header and signature****Answer: B****Explanation:**ExplanationJSON Web Token (JWT) is an open standard (RFC 7519) that defines a compact and self-contained way for securely transmitting information between parties as a JSON object. This information can be verified and trusted because it is digitally signed. JWTs can be signed using a secret (with the HMAC algorithm) or a public/private key pair using RSA or ECDSA.JSON Web Tokens are composed of three parts, separated by a dot (.): Header, Payload, Signature. Therefore, a JWT typically looks like the following:xxxxx.yyyyy.zzzzzThe header typically consists of two parts: the type of the token, which is JWT, and the signing algorithm being used, such as HMAC SHA256 or RSA.The second part of the token is the payload, which contains the claims. Claims are statements about an entity (typically, the user) and additional data.To create the signature part you have to take the encoded header, the encoded payload, a secret, the algorithm specified in the header, and sign that.Reference: <https://jwt.io/introduction/>
