NEW QUESTION: 1You are installing the Solaris 11 Operation System by using the Text Installer. A panel prompts you to create a root password and a user account. Which four describe your options for completing this panel of the Installation?**A.** The root password must be set and cannot be blank.**B.** If you do not provide a username, root is an account rather than a role and is set to expire immediately.**C.** If you provide a username, root is an account rather than a role and is set to expire immediately.**D.** If you provide a username, that user is given root privileges.**E.** Creating a user account is optional.**F.** If you provide a username, that user is assigned the root role.**G.** The root password can be left blank.**Answer: A,B,E,F**Explanation: A:You are not required to create a user account.B: You must create a root password.D: If you create a user account in this panel, you need to provide both the user's password and a root password.In this case, root will be a role assigned to the user.G:If you do not create a user account, you still need to provide a root password.In this case, root will be a regular user. Reference:Oracle Solaris 11 Information Library,Installing With the Text Installer, Complete the User panel.

NEW QUESTION: 2An organization has its employees' names in an Employees table, and information about their jobs in a Jobs table.However, an organization's employees can have multiple jobs, and the same job can be performed by multiple employees. This situation would result in a many to-many relationship between the Employees and Jobs tables. How can the many to-many relationship issue be resolved?**A.** By creating a logical table source (LTS) that joins the Employees and Jobs tables**B.** By creating the many to many join in the physical model **C.** By modeling the many to many relationship in the business model**D.** By creating a bridge table that represents one employee doing one job, with several rows for an employee who has several jobs**Answer: D**Explanation:ExplanationWhen you need to model many-to-many relationships between dimension tables and fact tables, you can create a bridge table that resides between the fact and the dimension tables. A bridge table stores multiple records corresponding to that dimension. In the Administration Tool, General tab in the Logical Table

dialog box contains a check box that you can select to specify that a table is a bridge table. A bridge table allows you to resolve many-to-many data relationships. Reference; OBI Server Administration Server Guide, Version 10.1, Identifying Bridge Tables

NEW QUESTION: 3 Given this code fragment:

```
public static void main(String[] args) { try { String query = "SELECT * FROM Item"; Statement stmt = conn.createStatement(); ResultSet rs = stmt.executeQuery(query); ResultSetMetaData rsmd = rs.getMetaData(); // Line 14 int colCount = rsmd.getColumnCount(); while (rs.next()) { for (int i = 1; i <= colCount; i++) { System.out.print(rs.getObject(i) + " "); // Line 17 } System.out.println(); } } catch (SQLException se) { System.out.println("Error"); } }
```

Assume that the SQL query returns records. What is the result?
A. Compilation fails at line 14
B. The program prints each record
C. Compilation fails due to error at line 17
D. The program prints Error
Answer: B

NEW QUESTION: 4 A company is rolling out a new e-commerce website. The security analyst wants to reduce the risk of the new website being comprised by confirming that system patches are up to date, application hot fixes are current, and unneeded ports and services have been disabled. To do this, the security analyst will perform a:
