NEW QUESTION: 1Examine the modified output:Seconds_Behind_Master value is steadily growing. What are two possible causes? (Choose two.)**A.** The parallel slave threads are experiencing lock contention.**B.** The master is producing a large volume of events in parallel but the slave is processing them serially.**C.** The master is most probably too busy to transmit data and the slave needs to wait for more data.**D.** This value shows only I/O latency and is not indicative of the size of the transaction queue.**E.** One or more large tables do not have primary keys.**Answer: B,D**

NEW QUESTION: 2DRAG DROP A company's SharePoint environment contains a single web application with a root site collection that hosts the company intranet site. The company plans to allow project managers to create project-specific sites and assign permissions for those sites to project team members. The project sites will contain large files. You have the following requirements: - Create a separate area of the intranet site for the purpose of containing project sites. - Assign a distinct URL to the project site area. - Ensure that project managers can create project sites and add users to project sites. - Ensure that project site data is stored separately from other intranet site content. You need to create and configure the project site area. Which three actions should you perform in sequence? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)**Answer:** Explanation: Explanation: * Create managed path for the web application* In a content database separate from that of the intranet site create a site collection* In the root site for the site collection, grant permissions

NEW QUESTION: 3現在のAironet Wave 2

2800シリーズは、ミッドマーケット向けにどこに移行しますか？**A.** Catalyst 9115**B.** Catalyst 9800
C. Aironet 4800**D.** Catalyst 9120**Answer: B**

NEW QUESTION: 4A. Option B**B.** Option C**C.** Option A**D.** Option D**Answer: C****Explanation:**
ExplanationTo determine whether a log file was modified, deleted, or unchanged after CloudTrail delivered it, you can use CloudTrail log file integrity validation. This feature is built using industry standard algorithms: SHA-256 for hashing and SHA-256 with RSA for digital signing. This makes it computationally infeasible to modify, delete or forge CloudTrail log files without detection. You can use the AWS CLI to validate the files in the location where CloudTrail delivered them Validated log files are invaluable in security and forensic investigations. For example, a validated log file enables you to assert positively that the log file itself has not changed, or that particular user credentials performed specific API activity. The CloudTrail log file integrity validation process also lets you know if a log file has been deleted or changed, or assert positively that no log files were delivered to your account during a given period of time. For more information on Cloudtrail log file validation, please visit the below URL:
<http://docs.aws.amazon.com/awsccloudtrail/latest/userguide/cloudtrail-log-file-validation-intro.html>
