NEW QUESTION: 3How can using Cisco Application Networking Solutions help customers?**A.** reduces security breaches**B.** improves service content**C.** reduces CapEx**D.** improves service reliability**Answer: D****Explanation:**Explanation/Reference:Cisco has two main categories of Application Networking Solutions. Data center solutions provide secure, reliable, high-performing data center infrastructure for application traffic within or across data centers. Branch office and WAN solutions provide LAN-like performance for applications delivered over the WAN, and thus enable IT to consolidate servers/storage within the branch office. Cisco branch solutions for application delivery are deployed symmetrically in both the data center and branch offices.

NEW QUESTION: 4Which of the following is electromagnetic interference (EMI) that is noise from the radiation generated by the difference between the hot and ground wires?**A.**

transversal-mode noise **B**. common-mode noise **C**. traverse-mode noise **D**. crossover-mode noise **Answer: B** Explanation: The Answer: Common-mode noise is electrical noise between the hot and ground wire and between the neutral and ground wire. Common mode noise will disrupt the memory logic of the processor. Noise between neutral and ground creates problems since the theoretical zero voltage between neutral and ground is utilized by microprocessors and digital logic control systems as zero voltage reference. A voltage on the ground wire will disrupt the stored memory variables of today's fast microprocessors. Common mode noise can be incorrectly interpreted as data. This noise can cause what appears to be "software glitches", erratic performance of the equipment and partial or complete memory loss. Poor grounding also contributes significantly to common mode noise and this dynamic situation can change with building age, material corrosion, soil conditions and construction. Source: KRUTZ, Ronald L. & VINES, Russel D., The CISSP Prep Guide: Mastering the Ten Domains of Computer Security, page 332. The Official ISC2 Study book on page 461 says: EMI is categorized as either common-mode noise or traverse-mode noise. Common-Mode noise occurs between hot and ground wires. Traverse-mode noise occurs between hot and neutral wires.
