**NEW QUESTION: 1**What is the ABAP Dictionary used for? (Choose two)**A.** To maintain documentation (for example, documentation on customizing activities or the application help of a transaction).**B.** To maintain Services for programs and screens, for example, F1-help, search help (F4), Lock object (enqueues)**C.** To define database objects, for example, tables and views on the Database.**D.** To maintain ABAP programs.**Answer: B,C**

**NEW QUESTION: 2**Which of the following statements about the UML state diagram is correct?**A.** The states in the state diagram can be arranged in chronological order**B.** The flow chart we often say is the state diagram**C.** State diagram shows the migration relationship of different classes**D.** Change in state. Triggered by internal and external events**Answer: D**

**NEW QUESTION: 3**You have two SharePoint Server 2010 server farms named Farm1 and Farm2. You create a Taxonomy Term Store on Farm1. You need to ensure that Farm2 can access the Taxonomy Term store on Farm1. What should you do on Farm1?**A.** Configure content deployment paths and jobs.**B.** Configure alternate access mappings.**C.** Publish the

Managed Metadata Service Application.**D.** Publish the Business Data Connectivity service Application.**Answer: C**Explanation: BURGOS MNEMO: "Taxonomy Term Store" = "Publish the Managed Metadata"

**NEW QUESTION: 4** Refer to the exhibit. What is a reason for the RIB-failure?**A.** CEF is not enabled on this router.**B.** The route 10.100.1.1/32 is in the routing table, but not as a BGP route.**C.** The routing table has yet to be updated with the BGP route.**D.** The BGP route is filtered inbound and hence is not installed in the routing table.**Answer: B**Explanation: Explanation/Reference: Explanation: A rib-failure occurs when BGP tries to install the bestpath prefix into the RIB, but the RIB rejects the BGP route because a route with better administrative distance already exists in the routing table. An inactive Border Gateway Protocol (BGP) route is a route that is not installed in the RIB, but is installed in the BGP table as rib-failure. Example Topology Router 1 (R1) and router 2 (R2) have two parallel links; one link runs BGP AS 65535 and the other link runs Enhanced Interior Gateway Routing Protocol (EIGRP) AS 1. Both BGP and EIGRP are advertising the network 10.1.1.1/32 on R1. R2 learns about the 1.1.1.1/32 route through both EIGRP and BGP, but installs only the EIGRP route in the routing table because of the lower administrative distance. Since the BGP route is not installed in the R2 routing table, the route appears as a rib-failure in the R2 BGP table.
