NEW QUESTION: 1 Welche der folgenden Techniken ist am nützlichsten, wenn ein Incident-Response-Team auf externe Angriffe auf mehrere Unternehmensnetzwerkgeräte reagieren muss?
A. Analyse der Endpunkt-Basiskonfiguration
B. Penetrationstests von Netzwerkgeräten
C. Korrelationsanalyse von Sicherheitsereignissen
D. Schwachstellenbewertung von Netzwerkgeräten
Answer: C

NEW QUESTION: 2 **A.** Option B
B. Option A
C. Option D
D. Option C
Answer: A,B,D
Explanation: Connection security involves the authentication of two computers before they begin communications and the securing of information sent between two computers. Windows Firewall with Advanced Security uses Internet Protocol security (IPsec) to achieve connection security by using key exchange, authentication, data integrity, and, optionally, data encryption. How firewall rules and connection security rules are related Firewall rules allow traffic through the firewall, but do not secure that traffic. To secure traffic with IPsec, you can create Computer Connection Security rules. However, the creation of a connection security rule does not allow the traffic through the firewall. You must create a firewall rule to do this, if the traffic is not allowed by the default behavior of the firewall. Connection security rules are not applied to programs or services; they are applied between the computers that make up the two endpoints.

NEW QUESTION: 3 Refer to the exhibit. The DHCP client is unable to receive a DHCP address from the DHCP server. Consider the following output:
