NEW QUESTION: 1 Which two protocols provide loop prevention in underlay network? (Choose two.)
A. VPLS **B.** EVPN **C.** MSTP **D.** OSPF
Answer: A, C

NEW QUESTION: 2 A company runs a multi-tier web application that hosts news content. The application runs on Amazon EC2 instances behind an Application Load Balancer. The instances run in an EC2 Auto Scaling group across multiple Availability Zones and use an Amazon Aurora database. A solutions architect needs to make the application more resilient to periodic increases in request rates. Which architecture should the solutions architect implement? (Select TWO)
A. Add Aurora Replicas **B.** Add an Amazon CloudFront distribution in front of the Application Load Balancer **C.** Add AWS Direct Connect **D.** Add AWS Shield **E.** Add AWS Global Accelerator
Answer: B, E
Explanation: Explanation AWS Global Accelerator Acceleration for latency-sensitive applications Many applications, especially in areas such as gaming, media, mobile apps, and financials, require very low latency for a great user experience. To improve the user experience, Global Accelerator directs user traffic to the application endpoint that is nearest to the client, which reduces internet latency and jitter. Global Accelerator routes traffic to the closest edge location by using Anycast, and then routes it to the closest regional endpoint over the AWS global network. Global Accelerator quickly reacts to changes in network performance to improve your users' application performance. Amazon CloudFront Amazon CloudFront is a fast content delivery network (CDN) service that securely delivers data, videos, applications, and APIs to customers globally with low latency, high transfer speeds, all within a developer-friendly environment.

NEW QUESTION: 3 The consulting company has created the scope of work for the project. They are in the process of creating a schedule and budget. They have added time into the schedule for the delays that always happen. They are also allocating money into the budget for more computers and software that are usually needed beyond what is initially forecast. These items are an example of what?
A. Unknown unknowns **B.** Known unknowns **C.** Management reserve **D.** Risk management
Answer: B

NEW QUESTION: 4 Der wahrscheinlichste Fehler beim Implementieren einer Firewall ist:
A. Anschließen eines Modems an die Computer im Netzwerk **B.** Die Zugriffslisten wurden falsch konfiguriert **C.** Das Netzwerk und der Server werden nicht ausreichend vor Virenangriffen geschützt **D.** Gefährdung der Passwörter durch Social Engineering
Answer: B
Explanation: Erläuterung: Eine aktualisierte und fehlerfreie Zugriffsliste ist eine große Herausforderung und

daher zum Zeitpunkt der Erstinstallation mit der größten Wahrscheinlichkeit für Fehler verbunden. Passwörter gelten nicht für Firewalls, ein Modem umgeht eine Firewall und ein Virenangriff ist kein Element bei der Implementierung einer Firewall.
