NEW QUESTION: 2DRAG DROPYour network contains an Active Directory domain named contoso.com. The domain contains multiple servers that are configured as Hyper-V hosts. You plan to implement four virtual machines. The virtual machines will be configured as shown in the following table. You need to identify which network must be added to each virtual machine. Which network types should you identify? To answer, drag the appropriate Network Type to the correct virtual machine in the answer area. Each Network Type may be used once, more than once, or not at all. Additionally, you may need to drag the split bar between panes or scroll to view content.**Answer:** Explanation: Explanation:

<http://blogs.technet.com/b/jhoward/archive/2008/06/17/hyper-v-what-are-the-uses-for-different-types-of-virtual-networks.aspx>An external network, which provides communication between a virtual machine and a physical network by creating an association to a physical network adapter on the virtualization server. An internal network, which provides communication between the virtualization server and virtual machines. A private network, which provides communication between virtual machines only.

NEW QUESTION: 4A network engineer notices inconsistent Cisco Discovery Protocol neighbors according to the diagram that is provided. The engineer notices only a single neighbor that uses Cisco Discovery Protocol, but it has several routing neighbor relationships. What would cause the output to show only the single neighbor?**A.** IP routing is disabled on neighboring devices.**B.** Cisco Discovery Protocol advertisements are inconsistent between the local and remote devices.**C.** Cisco Express Forwarding is enabled locally.**D.** The routers are connected via a Layer 2 switch.**Answer: D**Explanation: Explanation/Reference: Explanation: If all of the routers are connected to each other using a layer 2 switch, then each router will only have the single switch port that it connects to as its neighbor. Even though multiple routing neighbors can be formed over a layer 2 network, only the physical port that it connects to will be seen as a CDP neighbor. CDP can be used to determine the physical topology, but not necessarily the logical topology.
