**NEW QUESTION: 1**Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet stated goals. Some questions sets might have more than one correct solution, while others might not have a correct solution.After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.Your company plans to use Microsoft Azure Resource Manager templates for all future deployments of SQL Server on Azure virtual machines.You need to create the templates.Solution: You create the desired SQL Server configuration in an Azure Resource Group, then export the Resource Group template and save it to the Templates Library.Does the solution meet the goal?**A. No****B. Yes****Answer: A**Explanation: Explanation/Reference:Explanation:Azure Resource Manager template consists of JSON, and expressions that you can use to construct values for your deployment.A good JSON editor, not a Resource Group template, can simplify the task of creating templates.Note: In its simplest structure, an Azure Resource Manager template contains the following elements:{"\$schema": "http://schema.management.azure.com/schemas/2015-01-01/deploymentTemplate.json#", "contentVersion": "", "parameters": {}, "variables": {}, "resources": [], "outputs": {}}References: <https://docs.microsoft.com/en-us/azure/azure-resource-manager/resource-group-authoring-templates>

**NEW QUESTION: 2**Consider a network that mixes link bandwidths from 128 kb/s to 40 Gb/s. Which value should be set for the OSPF reference bandwidth?**A. Set a value of 128.****B. Set a value of 65535.****C. Set a manual OSPF cost on each interface.****D. Use the default value.****E. Set a value of 40000.****F. Set a value of 40000000.****Answer: C**Explanation: Explanation/Reference: Explanation:Unlike the metric in RIP which is determined by hop count and EIGRP's crazy mathematical formulated metric, OSPF is a little more simple. The default formula to calculate the cost for the OSPF metric is (10

Related Posts8/ BW).By default the metrics reference cost is 100Mbps, so any link that is 100Mbps will have a metric of1. a T1 interface will have a metric of 64 so in this case if a router is trying to get to a FastEthernet network on a router that is through a T1 the metric would be 65 (64 +1).You do however have the ability to statically specify a metric on a per interface basis by using the ip ospf cost # where the cost is an integer between 1-65535.So the big question is why would you want to statically configure a metric?The biggest advantage of statically configuring an OSPF metric on an interface is to manipulate which route will be chosen dynamically via OSPF. In a nut shell it's like statically configuring a dynamic protocol to use a specific route. It should also be used when the interface bandwidths vary greatly (some very low bandwidth interfaces and some very high speed interfaces on the same router).

**NEW QUESTION: 4**組織は、VPNゲートウェイを使用してDCをAWS VPCに接続することによってデータセンターを拡張することを計画しています。組織は動的にルーティングされたVPN接続を設定しています。

下記の回答のどれが、この設定をセットアップするのに必要ではありませんか？**A.**

組織がVPCへのVPN接続を介してアドバタイズすることを望むElastic IP範囲。**B.** Cisco

ASA、Juniper Jシリーズ、Juniper SSG、Yamahaなどのカスタマーゲートウェイの種類。**C.**

カスタマーゲートウェイのボーダーゲートウェイプロトコル (BGP) 自律システム番号 (ASN) 。

**D.**

カスタマーゲートウェイの外部インターフェイスのインターネットルーティング可能IPアドレス (静的) 。**Answer: A**Explanation:ExplanationThe Amazon Virtual Private Cloud (Amazon VPC) allows the user to define a virtual networking environment in a private, isolated section of the Amazon Web Services (AWS) cloud. The user has complete control over the virtual networking environment. The organization wants to extend their network into the cloud and also directly access the internet from their AWS VPC. Thus, the organization should setup a Virtual Private Cloud (VPC) with a public subnet and a private subnet, and a virtual private gateway to enable communication with their data center network over an IPsec VPN tunnel. To setup this configuration the organization needs to use the Amazon VPC with a VPN connection. The organization network administrator must designate a physical appliance as a customer gateway and configure it. The organization would need the below mentioned information to setup this configuration:The type of customer gateway, such as Cisco ASA, Juniper J-Series, Juniper SSG, Yamaha Internet-routable IP address (static) of the customer gateway's external interface Border Gateway Protocol (BGP) Autonomous System Number (ASN) of the customer gateway, if the organization is creating a dynamically routed VPN connection. Internal network IP ranges that the user wants to advertise over the VPN connection to the VPC.
