NEW QUESTION: 1 Universal Containers requires that a case is logged for every incoming support call. Each case could require an associated Return Materials Authorization (RMA) and/or Field Service Request (FSR). The original case CANNOT be closed until all RMAs and FSRs are closed. Universal Containers is considering whether RMAs and FSRs should be stored on a child case or on a related custom object. What should Universal Containers consider when designing the solution? Choose 3 answers
A. Relationship to the primary contact
B. Average incoming case volume
C. RMA and FSR escalation requirements
D. Visibility and access to the RMA and FSR records
E. Case closure rules on the original case
Answer: C,D,E

NEW QUESTION: 2 Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution. After you answer a question in this scenario, you will NOT be able to return to it. As a result, these questions will not appear in the review screen. You have a container named Sales in an Azure Cosmos DB database. Sales has 120 GB of data. Each entry in Sales has the following structure. The partition key is set to the OrderId attribute. Users report that when they perform queries that retrieve data by ProductName, the queries take longer than expected to complete. You need to reduce the amount of time it takes to execute the problematic queries. Solution: You increase the Request Units (RUs) for the database. Does this meet the goal?
A. No
B. Yes
Answer: B
Explanation: Explanation To scale the provisioned throughput for your application, you can increase or decrease the number of RUs at any time. Note: The cost of all database operations is normalized by Azure Cosmos DB and is expressed by Request Units (or RUs, for short). You can think of RUs per second as the currency for throughput. RUs per second is a rate-based currency. It abstracts the system resources such as CPU, IOPS, and memory that are required to perform the database operations supported by Azure Cosmos DB.
