NEW QUESTION: 1A Scheduling Agreement is a framework purchase agreement or sales agreement under which materials are procured (on buying side). Products are delivered (on selling sides) on predetermined dates within a certain time period. The future delivery quantities and dates are entered as schedule lines in a delivery schedule.To reflect forecasted quantities and dates along with the more detailed requirements, two different types of scheduling agreement delivery schedules can be used. These are the following:There are 2 correct answers to this question.Response:**A.** Just-in-time delivery schedules (JIT schedules)**B.** Sales order Scheduling - Active**C.** Forecast delivery schedules (FRC schedules)**Answer: A,C**

NEW QUESTION: 2When setting up the system, you want to maintain default values for users of a company code. Which application do you use?**A.** Default Values (SAP Fiori)**B.** User Maintenance**C.** Maintain User Profile**Answer: B**Explanation:As a consultant, you would use the user maintenance applications (Transaction SU01 or better yet Transaction SU10). With these transactions, you can change users other than your own. Both the user profile and the default values in the SAP Fiori launchpad are limited to defaulting values only for the logged-on user.

NEW QUESTION: 3A company has a SharePoint farm that has the following configuration:--- SPWFE1 and SPWFE2 are configured as front-end web servers.SPAPP1 and SPAPP2 are configured as application servers.New servers will be added to the farm.You implement a solution that contains a custom navigation provider.You need to register a custom navigation provider by using the least amount of administrative effort.What should you do?**A.** Edit the ApplicationHost.config file on each SharePoint server.**B.** Create a web.solutionname.xml file in the CONFIG directory and run the copyappbincontentStsadm command.**C.** Edit the web.config file for the web application on all SharePoint servers.**D.** Use the SPWebConfigModification class.**Answer: D**Explanation:In Microsoft SharePoint Foundation, one way to modify web.config settings is to use the SPWebConfigModification class of the Microsoft.SharePoint.Administration namespace, which allows you to dynamically register entities. These modifications are persisted in the configuration database where they function as a kind of virtual web.config that effectively serves as the final layer of the .config file stack for the SharePoint Foundation web application. The changes become effective when the SPWebService.ApplyWebConfigModifications method is called.Reference: How to: Add and Remove Web.config Settings Programmatically
