And we have made scientific arrangements for the content of the C\_TS4CO\_2023 actual exam, There are a bunch of exam candidates who pass any exam smoothly which seems exotic **Reliable C\_TS4CO\_2023 Test Book** to you, actually, no one is doomed to succeed but choosing a right way to reach it.

Our experts have compiled the right questions and answers which will help you pass your SAP C\_TS4CO\_2023 exam in first attempt with the highest possible marks.

**NEW QUESTION: 1**What can Azure Information Protection encrypt?**A.** network traffic**B.** documents and email messages**C.** an Azure SQL database**D.** an Azure Storage account**Answer: B****Explanation:**Azure Information Protection can encrypt documents and emails.Azure Information Protection is a cloud-based solution that helps an organization to classify and optionally, protect its documents and emails by applying labels. Labels can be applied automatically by administrators who define rules and conditions, manually by users, or a combination where users are given recommendations.The protection technology uses Azure Rights Management (often abbreviated to Azure RMS). This technology is integrated with other Microsoft cloud services and applications, such as Office 365 and Azure Active Directory.This protection technology uses encryption, identity, and authorization policies. Similarly to the labels that are applied, protection that is applied by using Rights Management stays with the documents and emails, independently of the location-inside or outside your organization, networks, file servers, and applications.References:

<https://docs.microsoft.com/en-us/azure/information-protection/quickstart-label-dnf-protect-email>

**NEW QUESTION: 2**DRAG DROP**Answer:** Explanation:Explanation: Azure Notification Hubs provide an easy-to-use infrastructure that enables you to send mobile push notifications from any backend (in the cloud or on-premises) to any mobile platform.Configuration steps include:  
1. Configure your Notification Hub  
2. Connecting your app to the Notification Hub  
3. Send notification from your back-end  
You can send notifications using Notification Hubs from any back-end using the REST interface. You do this through a script, not a configuration of Mobile Services. Use Java or PHP for the script.Reference: Getting Started with Notification Hubs  
<https://azure.microsoft.com/en-us/documentation/articles/notification-hubs-windows-store-dotnet-get-started/#send-notification-from-your-back-end>
