NEW QUESTION: 1Which of the following does not belong to Huawei CCE's service advantages for stateful containers?
A. Data persistence storage
B. Multiple instances shared storage
C. Support a storage type
D. Data is not lost when the container instance fails or migrates
Answer: C

NEW QUESTION: 2Your server has one zone named dbzone (that has been configured, but not yet installed). Which command would you use to view all the options that were used to configure this zone?
A. zonecfg -z dbzone info
B. zones list -c summary dbzone
C. zonecfg -icv dbzone info
D. zoneadm list -icv dbzone
Answer: A
Explanation: zonecfg info Display information about the current configuration. If resource-type is specified, displays only information about resources of the relevant type. If any property-name value pairs are specified, displays only information about resources meeting the given criteria. In the resource scope, any arguments are ignored, and info displays information about the resource which is currently being added or modified.
Note: zonecfg -z zoneName. Specify the name of a zone. Zone names are case sensitive. Zone names must begin with an alphanumeric character and can contain alphanumeric characters, the underscore (_) the hyphen (-), and the dot (.). The name global and all names beginning with SUNW are reserved and cannot be used.
Incorrect answer: A: The zoneadm utility is used to administer system zones. A zone is an application container that is maintained by the operating system runtime.
list option: Display the name of the current zones,

or the specified zone if indicated.B: No such command.D: no such options zonecfg -icv

NEW QUESTION: 3 Which four options are important functions offered by the Cisco APIC?
