Our website is a professional site providing high-quality and technical products for examinees to pass their Windows Server AZ-800 exams.

**NEW QUESTION: 1** An administrator account is granted the CREATE SESSION and SET CONTAINER system privileges. A multitenant container database (CDB) instance has the following parameter set: `THREADED_EXECUTION = FALSE`. Which four statements are true about this administrator establishing connections to root in a CDB that has been opened in read only mode? **A.** You can connect as a local user by using the connect statement. **B.** You can connect by using OS authentication. **C.** You can connect by using easy connect. **D.** You can connect as a local user by using the SET CONTAINER statement. **E.** You can connect as a common user by using the connect statement. **F.** You can connect by using a Net Service name. **Answer: B,C,D,F**  
**Explanation:** \*The choice of threading model is dictated by the THREADED\_EXECUTION initialization parameter. `THREADED_EXECUTION=FALSE` : The default value causes Oracle to run using the multiprocess model. `THREADED_EXECUTION=TRUE` : Oracle runs with the multithreaded model. \*OS Authentication is not supported with the multithreaded model. \*THREADED\_EXECUTION When this initialization parameter is set to TRUE, which enables the multithreaded Oracle model, operating system authentication is not supported. Attempts to connect to the database using operating system authentication (for example, `CONNECT / AS SYSDBA` or `CONNECT /`) when this initialization parameter is set to TRUE receive an `ORA-01031 "insufficient privileges"` error. **F:** The new SET CONTAINER statement within a call back function: The advantage of SET CONTAINER is that the pool does not have to create a new connection to a PDB, if there is an existing connection to a different PDB. The pool can use the existing connection, and through SET CONTAINER, can connect to the desired PDB. This can be done using: `ALTER SESSION SET CONTAINER=<PDB Name>` This avoids the need to create a new connection from scratch.

**NEW QUESTION: 2** **A.** Option **A** **B.** Option **D** **C.** Option **C** **D.** Option **B** **Answer: C**

**NEW QUESTION: 3** What are two routing requirements for a device to communicate with another device? (Choose two.) **A.** end-to-end communications path **B.** routing information on participating Layer 3 devices **C.** hosts on the same Layer 2 broadcast domain **D.** hosts on the same Layer 3 broadcast domain **Answer: A,B**

**NEW QUESTION: 4** When an Alcatel-Lucent 7750 SR receives a BGP route with an AS Path loop, what action is taken by default? **A.** The route is flagged as invalid and placed in the LOC-RIB. **B.** The route is ignored. **C.** The route is flagged as invalid and placed in the RIB-Out. **D.** The route is flagged as invalid and placed in the RIB-In. **Answer: D**
