<https://docs.oracle.com/en/cloud/saas/project-portfolio-management/19a/oapfm/project-foundation-configuration> Topic - Associating Project Types and Class Categories: Examples Project classifications group your projects according to categories and codes that you define. When you associate project classifications with project types, the classification is available for selection on projects with that project type. Use any of the following methods to associate class categories with project types: * Add a classification to the project type definition For each classification that you associate with the project type, you can enable the Assign to All Projects option to automatically add the classification to the project definition for all new projects with the project type. When this option is enabled, all projects with this project type must be assigned a class code for the class category. * Add a project type to the class category definition

* Enable the Assign to all Project Types option on the class category definition

NEW QUESTION: 2You are a Dynamics 365 Customer Service system administrator. You export a solution containing customization from the development environment and import the solution into a quality assurance environment. You need to allow removal of the customization and solution from the quality assurance environment. What should you do?
A. Update the publisher prefix to new.
B. Export the solution as managed.
C. Export the solution as unmanaged.
D. Publish all customizations.
Answer: C
Explanation: A managed solution can be uninstalled after it is imported. All the components of that solution are deleted by uninstalling the solution. When you import an unmanaged solution, you add all the components of that solution into your default solution. You can't delete the components by uninstalling the solution.

NEW QUESTION: 3You have two databases named DB1 and DB2 that are located on the same server. You plan to create a stored procedure named SProc1 in DB1. SProc1 will query a table named Table2 in DB2. You need to recommend a solution to ensure that SProc1 can access Table2 without granting users direct access to Table2. What should you include in the recommendation? More than one answer choice may achieve the goal. Select the BEST answer.
A. Digital certificates
B. Contained databases
C. Cross-database ownership chaining
D. Application roles
Answer: D
Explanation: An application role is a database principal that enables an application to run with its own, user-like permissions. You can use application roles to enable access to specific data to only those users who connect through a particular application. Unlike database roles, application roles contain no members and are inactive by default.
