**NEW QUESTION: 2**An organization has its employees' names in an Employees table, and information about their jobs in a Jobs table. However, an organization's employees can have multiple jobs, and the same job can be performed by multiple employees. This situation would result in a many-to-many relationship between the Employees and Jobs tables. How can the many-to-many relationship issue be resolved?**A.** By creating the many-to-many join in the physical model**B.** By creating a logical table source (LTS) that joins the Employees and Jobs tables**C.** By creating a bridge table that represents one employee doing one job, with several

rows for an employee who has several jobs**D**. By modeling the many to many relationship in the business model**Answer: C**  
**Explanation:**ExplanationWhen you need to model many-to-many relationships between dimension tables and fact tables, you can create a bridge table that resides between the fact and the dimension tables. A bridge table stores multiple records corresponding to that dimension. In the Administration Tool, General tab in the Logical Table dialog box contains a check box that you can select to specify that a table is a bridge table.A bridge table allows you to resolve many-to-many data relationships.**Reference;** OBI Server Administration Server Guide, Version 10.1, Identifying Bridge Tables
