Once our JN0-1103 dumps guide: Design, Associate (JNCIA-Design) has new version, you can download free of charge within one year, that means you can always get the latest valid exam study guide.

We deeply believe that our JN0-1103 question torrent will help you pass the exam and get your certification successfully in a short time.

NEW QUESTION: 1A. Option CB. Option DC. Option AD. Option B**Answer: B**

NEW QUESTION: 2Evaluate the following SQL statement:Which statement is true regarding the outcome of the above query?**A.** It executes successfully but ignores the ORDER BY clause because it is not located at the end of the compound statement.**B.** It executes successfully and displays rows in the descending order of PROMO_CATEGORY.**C.** It produces an error because positional notation cannot be used in the ORDER BY clause with SET operators.**D.** It produces an error because the ORDER BY clause should appear only at the end of a compound query-that is, with the last SELECT statement.**Answer: D**

NEW QUESTION: 3When first analyzing an intrusion that has just been detected and confirming that it is a true positive, which of the following actions should be done as a first step if you wish to prosecute the attacker in court?**A.** Identify the attacks used to gain access.**B.** Back up the compromised systems.**C.** Isolate the compromised systems.**D.** Capture and record system information.**Answer: D****Explanation:**When an intrusion has been detected and confirmed, if you wish to prosecute the attacker in court, the following actions should be performed in the following order:Capture and record system information and evidence that may be lost, modified, or not captured during the execution of a backup procedure. Start with the most volatile memory areas first. Make at least two full backups of the compromised systems, using hardware-write-protectable or write-once media. A first backup may be used to re-install the compromised system for further analysis and the second one should be preserved in a secure location to preserve the chain of custody of evidence.Isolate the compromised systems.Search for signs of intrusions on other systems.Examine logs in order to gather more information and better identify other systems to which the intruder might have gained access.Search through logs of compromised systems for information that would reveal the kind of attacks used to gain access.Identify what the intruder did, for example by analyzing various log files, comparing checksums of known, trusted files to those on the compromised machine and by using other intrusion analysis tools.Regardless of the exact steps being followed, if you wish to prosecute in a court of law it means you MUST capture the evidence as a first step before it could be lost or contaminated. You always start with the most volatile evidence first.**NOTE:**I have received feedback saying that some other steps may be done such as Disconnecting the system from the network or shutting down the system. This is true. However, those are not choices listed within the 4 choices attached to this question, you MUST avoid changing the question. You must stick to the four choices presented and pick which one is the best out of the four presented.In real life, Forensic is not always black or white. There are many shades of grey. In real life you would have to consult your system policy (if you have one), get your Computer Incident team involved, and talk to your forensic expert and then decide what is the best course of action.**Reference(s)** Used for this question:
