the-globalprotect-client-authentication-configurations/define-the-globalprotect-agent-configurations"Select this option to allow the GlobalProtect agent to determine if it is inside the enterprise network. This option applies only to endpoints that are configured to communicate with internal gateways.When the user attempts to log in, the agent does a reverse DNS lookup of an internal host using the specified Hostname to the specified IP Address. The host serves as a reference point that is reachable if the endpoint is inside the enterprise network. If the agent finds the host, the endpoint is inside the network and the agent connects to an internal gateway; if the agent fails to find the internal host, the endpoint is outside the network and the agent establishes a tunnel to one of the external gateways"

NEW QUESTION: 2You are VMware designer working at a company where a new business application is being rolled out. The SLA requirements are RTO of 2 hours and RPO of 10 minutes. During a project team meeting, the business user misunderstands this requirement.To illustrate the situation, you give an example where the system becomes unavailable at 4 p.m. To meet the project SLA, . (Choose two)**A.** the application must be brought online and be accessible to users by 4:10 p.m.**B.** the application must be brought online and be accessible to users by 6 p.m.**C.** when the application is brought online, the data must be from a version as of 3:50 p.m.**D.** when the application is brought online, the data must be from a version as of 2 p.m.

Answer: B,CExplanation:The recovery time objective (RTO)-also known as the return to operation-is the amount of time it takes to restore a service after a failure has taken place. The recovery point objective (RPO) is the point in time to which the system needs to be restored following a failure.
