Be a hero, The system designed of SSM learning guide by our professional engineers is absolutely safe, Purchasing our Scrum SSM dumps pdf, and then passing exams and obtain the certification, success is on the way.

NEW QUESTION: 1 QUESTION NO: 75 Compare a typical Distributed Replicated Block Device (DRBD) with MySQL Standard Replication using master-slave replication. Which two statements are correct? **A.** DRBD uses shared-disk technology. **B.** Both technologies guarantee an identical copy of data on the secondary node. **C.** Only MySQL can maintain a time-delayed copy of data on the secondary node. **D.** Both technologies use the TCP/IP stack as their primary transmission medium. **Answer: A**

NEW QUESTION: 2 Your network contains an Active Directory forest. The forest contains a single domain. The forest has five Active Directory sites. Each site is associated to two subnets. You add a site named Site6 that contains two domain controllers. Site6 is associated to one subnet. You need to verify whether replication to the domain controllers in Site6 completes successfully. Which two possible commands can you use to achieve the goal? Each correct answer presents a complete solution. **A.** Get-ADReplicationSiteLink **B.** Get-ADReplicationSubnet **C.** repadmin /showrepl **D.** repadmin /showattr **E.** Get-ADReplicationUpToDateConsistencyVectorTable **Answer: C, E** Explanation: **B:** The Get-ADReplicationUpToDateConsistencyVectorTable cmdlet displays the highest Update Sequence Number (USN) for the specified domain controller(s). This information shows how up-to-date a replica is with its replication partners. During replication, each object that is replicated has USN and if the object is modified, the USN is incremented. The value of the USN for a given object is local to each domain controller where it has replicated and the number is different on each domain controller. **E:** The repadmin /showrepl command helps you understand the replication topology and replication failures. It reports status for each source domain controller from which the destination has an inbound connection object. The status report is categorized by directory partition.

NEW QUESTION: 3 Your network contains an on-premises Active Directory domain that syncs to an Azure Active Directory (Azure AD) tenant. The tenant contains the users shown in the following table. The tenant contains the groups shown in the following table. You configure a multi-factor authentication (MFA) registration policy that and the following settings: * Assignments: * Include: Group1 * Exclude: Group2 Controls: Require Azure MFA registration Enforce Policy: On For each of the following statements, select Yes if the statement is true. Otherwise, select No. **Answer:** Explanation: Explanation
