Yes, RealVCE can help you, Not only we provide the most valued Okta-Certified-Consultant study materials, but also we offer trustable and sincere after-sales services, Moreover, [NCP-DB Test Dumps Pdf](#) we are also providing money back guarantee on all of Okta Certified Consultant Exam test products.

Try our Okta-Certified-Consultant study tool and absorb new knowledge, The reasons why our exam preparation materials attract your attention are as follows, By this way, our Okta-Certified-Consultant learning guide can be your best learn partner.

The trick is also not to study hard, it's to study smart.

**NEW QUESTION: 1**Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.Your company has a project in Azure DevOps for a new web application.You need to ensure that when code is checked in, a build runs automatically.Solution: From the Triggers tab of the build pipeline, you select Enable continuous integration.Does this meet the goal?**A. No****B. Yes****Answer: A**  
Explanation:Explanation/Reference:Explanation:In Visual Designer you enable continuous integration (CI) by:1. Select the Triggers tab.2. Enable Continuous integration.A continuous integration trigger on a build pipeline indicates that the system should automatically queue a new build whenever a code change is committed.References:  
<https://docs.microsoft.com/en-us/azure/devops/pipelines/get-started-designer> Testlet 1 Case Study This is a case study. Case studies are not timed separately. You can use as much exam time as you would like to complete each case. However, there may be additional case studies and sections on this exam. You must manage your time to ensure that you are able to complete all questions included on this exam in the time provided.To answer the questions included in a case study, you will need to reference information that is provided in the case study. Case studies might contain exhibits and other resources that provide more information about the scenario that is described in the case study. Each question is independent of the other question on this case study.At the end of this case study, a review screen will appear. This screen allows you to review your answers and to make changes before you move to the next sections of the exam. After you begin a new section, you cannot return to this section.To start the case studyTo display the first question on this case study, click the Next button. Use the buttons in the left pane to explore the content of the case study before you answer the questions. Clicking these buttons displays information such as business requirements, existing environment, and problem statements. If the case study has an All Information tab, note that the information displayed is identical to the information displayed on the subsequent tabs. When you are ready to answer a question, click the Question button to return to the question.**Application Architecture**The company's primary application is a single monolithic retirement fund management system based on ASP.NET web forms that use logic written in VB.NET. Some new sections of the application are written in C#.Variations of the application are created for individual customers. Currently, there are more than 80 live code branches in the application's

code base. The application was developed by using Microsoft Visual Studio. Source code is stored in Team Foundation Server (TFS) in the main office. The branch offices access the source code by using TFS proxy servers. Architectural Issues Litware focuses on writing new code for customers. No resources are provided to refactor or remove existing code. Changes to the code base take a long time, as dependencies are not obvious to individual developers. Merge operations of the code often take months and involve many developers. Code merging frequently introduces bugs that are difficult to locate and resolve. Customers report that ownership costs of the retirement fund management system increase continually. The need to merge unrelated code makes even minor code changes expensive. Customers report that bug reporting is overly complex. Planned changes Litware plans to develop a new suite of applications for investment planning. The investment planning applications will require only minor integration with the existing retirement fund management system. The investment planning applications suite will include one multi-tier web application and two iOS mobile application. One mobile application will be used by employees; the other will be used by customers. Litware plans to move to a more agile development methodology. Shared code will be extracted into a series of packages. Litware has started an internal cloud transformation process and plans to use cloud-based services whenever suitable. Litware wants to become proactive in detecting failures, rather than always waiting for customer bug reports. Technical requirements The company's investment planning applications suite must meet the following requirements: New incoming connections through the firewall must be minimized. Members of a group named Developers must be able to install packages. The principle of least privilege must be used for all permission assignments. A branching strategy that supports developing new functionality in isolation must be used. Members of a group named Team Leaders must be able to create new packages and edit the permissions of package feeds. Visual Studio App Center must be used to centralize the reporting of mobile application crashes and device types in use. By default, all releases must remain available for 30 days, except for production releases, which must be kept for 60 days. Code quality and release quality are critical. During release, deployments must not proceed between stages if any active bugs are logged against the release. The mobile applications must be able to call the share pricing service of the existing retirement fund management system. Until the system is upgraded, the service will only support basic authentication over HTTPS. The required operating system configuration for the test servers changes weekly. Azure Automation State Configuration must be used to ensure that the operating system on each test server is configured the same way when the servers are created and checked periodically. Current Technical Issue The test servers are configured correctly when first deployed, but they experience configuration drift over time. Azure Automation State Configuration fails to correct the configurations. Azure Automation State Configuration nodes are registered by using the following command.

**NEW QUESTION: 2A. Option EB. Option AC. Option BD. Option DE. Option CF. Option F**  
**Answer: B,D**

### **NEW QUESTION: 3**

プロジェクトマネージャーは、プロジェクトの関与と完全なサポートが必要な、会社のさまざまな事業部門にまたがる2つの利害関係者を特定しました。プロジェクトマネージャーを関与させる前に、何をしておくべきですか？**A. 彼らの戦略的優先事項B. 彼らの文化と背景C. 地理的な場所D. 彼らのコミュニケーションスタイル**
