Security and Privacy, In case you have issues in finding or using any product be it related to HPE6-A84 Exam or other ASQ ASQ Certification certifications, our friendly support staff will assist you promptly whenever you contact us.

NEW QUESTION: 1You plan to deploy an Azure container instance by using the following Azure Resource Manager template. Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the template.**Answer:** Explanation:Explanation:Box 1: can connect to the container from any deviceIn the policy "osType": "window" refer that it will create a container in a container group that runs Windows but it won't block access depending on device type.Box 2: the container will restart automaticallyDocker provides restart policies to control whether your containers start automatically when they exit, or when Docker restarts. Restart policies ensure that linked containers are started in the correct order. Docker recommends that you use restart policies, and avoid using process managers to start containers.on-failure : Restart the container if it exits due to an error, which manifests as a non-zero exit code.As the flag is mentioned as "on-failure" in the policy, so it will restart automaticallyReference:
<https://docs.microsoft.com/en-us/cli/azure/container?view=azure-cli-latest>
<https://docs.docker.com/config/containers/start-containers-automatically/>

NEW QUESTION: 2You need to create a visualization to meet the reporting requirements of the sales managers.How should you create the visualization? To answer, select the appropriate options in the answer area.NOTE: Each correct selection is worth one point.**Answer:** Explanation:

NEW QUESTION: 3A. Option AB. Option DC. Option CD. Option B**Answer: B**Explanation: ExplanationCreating multiple cloudformation templates is an example of using nested stacks. The advantage of using nested stacks is given below as per the AWS documentation As your infrastructure grows, common patterns can emerge in which you declare the same components in each of your templates. You can separate out these common components and create dedicated templates for them. That way, you can mix and match different templates but use nested stacks to create a single, unified stack. Nested stacks are stacks that create other stacks. To create nested stacks, use the AWS::CloudFormation::Stackresource in your template to reference other templates.For more information on Cloudformation best practices, please refer to the below link.*
