NEW QUESTION: 1What is the API used to access nodes and node related information from a FreeMarker template?**A.** ScriptNode**B.** NodeRef**C.** TemplateObject**D.** TemplateNode**Answer: D**
Explanation:Explanation/Reference:References:
<http://docs.alfresco.com/4.2/references/API-FreeMarker-TemplateNode.html>
<https://community.alfresco.com/docs/DOC-4748-template-guide>

NEW QUESTION: 2You have a computer that runs Windows 7.You need to configure an application to connect to the computer by using the IPV6 loopback address.Which address should you specify?**A.** fe80::f56f:56cb:a136:4184**B.** ::1**C.** 127.0.0.1**D.** 12::1**Answer: B**
Explanation:
Loopback addressThe loopback address (0:0:0:0:0:0:1 or ::1) is used to identify a loopback interface, enabling a node to send packets to itself. It is equivalent to the IPv4 loopback address of 127.0.0.1. Packets addressed to the loopback address must never be sent on a link or forwarded by a router.Link-LocalLink-local addresses always begin with FE80. With the 64-bit interface identifier, the prefix for link-local addresses is always FE80::/64. An IPv6 router never forwards link-local traffic beyond the link.Nodes use link-local addresses when communicating with neighboring nodes on the same link. For example, on a single-link IPv6 network with no router, hosts use link-local addresses to communicate with other hosts on the link. Link-local addresses are equivalent to Automatic Private IP Addressing (APIPA) IPv4 addresses autoconfigured on computers that are running Windows. APIPA addresses use the 169.254.0.0/16 prefix. The scope of a link-local address is the local link.A link-local address is required for Neighbor Discovery processes and is always automatically configured, even in the absence of all other unicast addresses.

NEW QUESTION: 3You are administering a database that supports a data warehousing workload and is running in noarchivelog mode. You use RMAN to perform a level 0 backup on Sundays and level 1 incremental backups on all the other days of the week.One of the data files is corrupted and the current online redo log file is lost because of a media failure.Which action must you take for recovery?**A.** Restore all the data files, recover them by using the recover

database noredo command, and use the resetlogs option to open the database.**B.** Restore the data file, recover it by using the recover datafile noredo command, and use the resetlogs option to open the database.**C.** Restore the control file and all the data files, recover them by using the recover database noredo command, and use the resetlogs option to open the database.**D.** Restore all the data files, recover them by using the recover database command, and open the database.**Answer: C**
