Best way to deal with exam, Dedication to providing [Valid Braindumps PL-400 Ppt](#) the accurate IBM PowerVC v2.2 Administrator Specialty test questions and answers, along with brief descriptions, The 100% guarantee pass pass rate of S2000-024 training materials that guarantee you to pass your Exam and will not permit any type of failure.

Our study materials are choosing the key from past materials to finish our S2000-024 torrent prep.

NEW QUESTION: 1Your network contains an Active Directory domain named contoso.com. All domain controllers run Windows Server 2012 R2. DirectAccess is deployed to the network. Remote users connect to the DirectAccess server by using a variety of network speeds. The remote users report that sometimes their connection is very slow. You need to minimize Group Policy processing across all wireless wide area network (WWAN) connections. Which Group Policy setting should you configure?
A. Configure wireless policy processing.
B. Configure Direct Access connections as a fast network connection.
C. Configure Group Policy slow link detection.
D. Change Group Policy processing to run asynchronously when a slow network connection is detected.
Answer: C
Explanation: Explanation/Reference: Explanation:

NEW QUESTION: 2An engineer notices that many BGP peers utilize the same configuration parameters. What can the engineer configure to simplify BGP neighbor statements and generate more efficient BGP peer updates?
A. session templates
B. policy templates
C. peer groups
D. peer address families
Answer: C

NEW QUESTION: 3Your network contains a single Active Directory domain. The domain contains two servers. The servers are configured as shown in the following table. Server2 is configured to use Server1 as a licensing server. You install 100 Remote Desktop Services Per User client access licenses (RDS Per User CALs) on Server1. You discover that when users connect to Remote Desktop Services (RDS) on Server2, they receive temporary licenses. You need to ensure that users receive permanent licenses when they connect to Server2. What should you do?
A. On Server2, install the RD Licensing role service.
B. On Server1, change the discovery scope of the license server to Domain.
C. On Server1, remove the RD Session Host role service.
D. On Server2, change the Remote Desktop licensing mode to Per User.
Answer: D
Explanation: When a Remote Desktop Session Host (RD Session Host) server is configured to use Per Device licensing mode, and a client computer or device connects to an RD Session Host server for the first time, the client computer or device is issued a temporary license by default. When a client computer or device connects to an RD Session Host server for the second time, if the Remote Desktop license server is activated and enough RDS Per Device CALs are available, the license server issues the client computer or device a permanent RDS Per Device CAL. If the license server is not activated or does not have any RDS Per Device CALs available, the device continues to use the temporary license. The temporary license is valid for 90 days. Because no Per Device CALs are available, we've got "100 Remote Desktop Services Per User client access

licenses (RDS Per User CALs)" on Server1, the device will never get its permanent Per Device CAL.Source: <http://technet.microsoft.com/en-us/library/cc732416.aspx>
