NEW QUESTION: 1 Which must bear the primary responsibility for determining the level of protection needed for information systems resources?
A. systems Auditors
B. Senior Management
C. IS security specialists
D. Senior security analysts
Answer: B
Explanation: If there is no support by senior management to implement, execute, and enforce security policies and procedure, then they won't work. Senior management must be involved in this because they have an obligation to the organization to protect the assets. The requirement here is for management to show "due diligence" in establishing an effective compliance, or security program. It is senior management that could face legal repercussions if they do not have sufficient controls in place. The following answers are incorrect: IS security specialists. Is incorrect because it is not the best answer. Senior management bears the primary responsibility for determining the level of protection needed. Senior security analysts. Is incorrect because it is not the best answer. Senior management bears the primary responsibility for determining the level of protection needed. systems auditors. Is incorrect because it is not the best answer, system auditors are responsible that the controls in place are effective. Senior management bears the primary responsibility for determining the level of protection needed.

NEW QUESTION: 2 A system has several multipathed devices. Some of them are in use with mounted file systems. The remaining multipathed devices are unused. The multipath command with the -F option is issued as shown:
[root@host03 /]# multipath -F
Which statement is true?
A. All multipath mapping except those that are in use are flushed, removing their mappings. The mounted file system is unaffected.
B. The command returns a syntax error because an mpath device name must be supplied as the argument to the -F switch.
C. All multipath mapping are flushed, thus removing their mpath mappings. The mounted file system is unusable.
D. Any faulted multipath devices are fixed, causing their faulty paths to be rediscovered if the underlying device is found to be available again. The mounted file system is unaffected.

Answer: C

NEW QUESTION: 3
