**NEW QUESTION: 1** There are often disadvantages when using mixed hardware, and uniform systems are highly advised. What are three disadvantages of using validated yet mixed hardware? (Choose three.)  
**A.** "Software only" solutions can result in a lack of simplicity for installation and maintenance. While setup and maintenance of an HCI solution might be simple you still need to configure and maintain the hardware part, which is not orchestrated by the HCI solution.  
**B.** "Software only" solutions are inherently more secure, adhering to government regulations.  
**C.** Validated hardware does not mean smooth performance, which particularly applies to hardware that is seldom chosen for the hardware part of the "software only" solution.  
**D.** "Hardware only" solutions require less latency for data aggregation.  
**E.** "Software only" HCI solutions often mean that HCI vendors do not have control over the hardware that the consumer is using. The lack of control over the hardware can result in hardware not being security-compliant (usually the case with white box solutions) or not being optimally configured for the given HCI solution.  
**F.** Validated yet "mixed" hardware systems may be supported by the specific original equipment manufacturers but software vendors require a master level service agreement.  
**Answer: C,D,F**
