NEW QUESTION: 1Rule authors need to select a city from a drop-down list of more than 1000 cities when editing the condition statement of a rule within Decision Center. An application developer decides to customize the user experience so that the rule authors can search for a city in a popup window. How should the application developer do this?**A.** Create a value descriptor and integrate it into Decision Center.**B.** Create a custom business rule language and publish it to Decision Center.**C.** Create a value provider and integrate it into Decision Center.**D.** Create a value editor and integrate it into Decision Center.**Answer: D**

NEW QUESTION: 2**A.** switch(config-if)#switchport mode access switch(config-if)#switchport port-security mac-address 1**B.** switch(config-if)#switchport mode access switch(config-if)#switchport port-security maximum 1**C.** switch(config-if)#switchport mode trunk switch(config-if)#switchport port-security maximum 1**D.** switch(config-if)#switchport mode trunk switch(config-if)#switchport port-security mac-address 1**Answer: B****Explanation:** This question is to examine the layer 2 security configuration. In order to satisfy the requirements of this question, you should perform the following configurations in the interface mode: First, configure the interface mode as the access mode Second, enable the port security and set the maximum number of connections to 1.

NEW QUESTION: 3An HP CloudSystem solution has been installed on the company data center to accommodate three (Dev, OA, Prod) departments computing requirements. Each department insists that they are the only owners who control and access their services, but the resource are shared using an IT as a service model with weekly pricing for services. Each group has their own Designer account and designed users are placed in the IO_users group. Some templates are shared all three departments. The Dev department has decided to contribute six additional DL380 servers to the environment to be used as hypervisor hosts with the requirement that only they can have access to those servers. The Prod department has encountered situations where their services are placed on low performance disk drives and has asked that the situations be fixed to use high performance drives. The QA department utilization of the cloud is sporadic. When they use it, the QA department guidelines heavy loads during the entire week-long testing cycle. Refer to the scenario. Management has asked for a strategy moving forward that can address the disk performance issues that the Prod department is having. Which strategy can be implemented to give Prod the opportunity to ensure performance for their services, while encouraging other departments to evaluate their own requirements before ordering services?**A.** Change the pricing scheme for disk space to include service tiers**B.** Add a Prod tag to all the high performance disks**C.** Alter which disk type each template is utilizing**D.** Remove other department tags from high performance**Answer: C**
