NEW QUESTION: 1Your network contains an Active Directory domain. The domain contains two domain controllers named DC1 and DC2. DC2 is a virtual machine that is hosted on a Hyper-V host named HyperV1. DC1 holds the PDC emulator operations master role. You need to create a new domain controller named DC3 by using domain controller cloning. Which five actions should you perform in sequence before you can import the cloned virtual machine? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order. NOTE: More than one order of answer choices is correct. You will receive credit for any of the correct orders you select. **Answer:** Explanation: Explanation

NEW QUESTION: 2Because some clients have reported unauthorized activity on their accounts, a security analyst is reviewing network packet captures from the company's API server. A portion of a capture file is shown below:

NEW QUESTION: 3 Which of the following AWS feature enables a user to launch a pre-configured Amazon Elastic Cloud (Amazon EC2) instance? **A.** Amazon Machine Image **B.** Amazon AppStream 2.0 **C.** Amazon EC2 System Manager **D.** Amazon Elastic Block Store (Amazon EBS) **Answer: A**

NEW QUESTION: 4 An analyst gathered the following information about a company: 01/01/01 - 20,000 shares issued and outstanding at the beginning of the year * 04/01/01 - 5.0% stock dividend * 07/01/01 - 5,000 shares repurchased * 10/01/01 - 2:1 stock split * What is the company's weighted average number of shares outstanding at the end of 2001? **A.** 37,000 **B.** 45,000 **C.** 39,500 **Answer: A** Explanation: The end-of-period weighted average number of common shares outstanding is the number of shares outstanding during the year weighted by the portion of the year they were outstanding. Dividends and splits are applied to all shares issued or repurchased and all original or adjusted shares outstanding prior to the split or dividend. Step 1) Apply the 04/01/01 dividend to the beginning of year shares: Adjusted shares = 1.05 x 20,000 = 21,000. Step 2) Apply the 10/01/01 split to the adjusted beginning-of-year shares and the repurchase. Adjusted beginning-of-year shares = 42,000 (= 2 x 21,000). Adjusted repurchase = 10,000 (= 2 x 5,000). Step 3) Compute the weighted average number of shares. $42,000(12/12) - 10,000(6/12) = 37,000$ shares.
