NEW QUESTION: 1You have created several preemptible Linux virtual machine instances using Google Compute Engine. You want to properly shut down your application before the virtual machines are preempted. What should you do?**A.** Create a shutdown script registered as a xinetd service in Linux and configure a StackDriver endpoint check to call the service.**B.** Create a shutdown script named shutdown in the /etc/ directory.**C.** Create a shutdown script, registered as a xinetd service in Linux, and use the gcloud compute instances add-metadata command to specify the service URL as the value for a new metadata entry with the key shutdown-script-url**D.** Create a shutdown script and use it as the value for a new metadata entry with the key shutdown- script in the Cloud Platform Console when you create the new virtual machine instance.**Answer: D****Explanation:**Running Shutdown Scripts "Create and run shutdown scripts that execute commands right before an instance is terminated or restarted, on a best-effort basis. This is useful if you rely on automated scripts to start up and shut down instances, allowing instances time to clean up or perform tasks, such as exporting logs, or syncing with other systems."https://cloud.google.com/compute/docs/shutdownscriptTo setup Shutdown Scripts, go to GCP console and follow the steps:Compute Engine -> VM instance -> Create Instance -> (Expand) Management, disks, networking, SSH keys Enter the key "shutdown-script" and proper value

NEW QUESTION: 2Which of the following statements regarding the process of sending and receiving data frames on a port in access link-type is true?**A.** VLAN tags are removed before data frames are sent.**B.** A switch learns the destination MAC address in the data frames when they are received on the switch's port.**C.** Only untagged data frames are received.**D.** Tagged data frames that are received are directly discarded.**Answer: B**

NEW QUESTION: 3Your network contains a server named Server1 that runs Windows Server 2003 Service Pack (SP2).You install a new network adapter on Server1. You need to view the media access control (MAC) address for the new network adapter.What should you do?**A.** At the command prompt, run Ipconfig /all.**B.** At the command prompt, run Net view \server1.**C.** From the Services snap in, view the properties on the Network Connections service.**D.** From the Device Manager snap in, view the properties of the network adapter.**Answer: A**
