NEW QUESTION: 1 While performing a regular check on your recovery catalog you realized that the catalog database is running out of space and you do not have options to increase the space. However, you have another database where more space is available and you want to move your existing recovery catalog to this database. The options that can be considered while moving the recovery catalog are as follows: 1. Using one of the Oracle expdp utilities to export the catalog data 2. Creating a recovery catalog user and granting the necessary privileges in the other database 3. Creating the recovery catalog using the CREATE CATALOG command 4. Using the corresponding impdp utility to import the catalog data into the other database 5. Registering the target database in the new catalog database using the REGISTER DATABASE command. Identify the option with the correct sequence for moving the recovery catalog. **A.** 1, 2, 4 **B.** 1, 2, 3, 4, 5 **C.** 2, 3, 5 **D.** 1, 2, 4, 5 **Answer: A** Explanation: Explanation/Reference: Explanation: The exp/imp tools can export and import the complete data structure and data extents to the destination database, so that you don't need to do create catalog and register database.

NEW QUESTION: 2 As a part of the Setup Utility, the administrator sets the host name for the BE1 IGP. What would be the result if the two systems in a redundant pair were set to the same host name. **A.** When the administrator attempts to access the configuration utility using the host name, they will always connect to the active system. **B.** The first time the systems are synchronized the receiving system will be assigned the same self-IP addresses as the source system. **C.** Host names do not matter in redundant pair communication. **D.** In a redundant pair, the two systems will always have the same host name. The parameter is synchronized between the systems. **Answer: B**
