In this question, we need to modify the Skype for Business address. Skype for Business addresses are notated by placing SIP: in front of the address whereas Exchange email addresses are notated by placing SMTP: in front of the address. In the PowerShell script: The \$ID variable is used to store the user's identity. The \$OldAddress variable is used to store the user's old Skype for Business address SIP:[\[email protected\]](#). The \$NewAddress variable is used to store the user's new Skype for Business address SIP:User1-[\[email protected\]](#). In the following PowerShell command: Set-Mailbox -Identity \$ID -EmailAddresses@{add = "\$NewAddress"; remove = "\$Old Address"} The EmailAddresses parameter adds the new address by (add = "\$NewAddress") and removes the old address (remove = "\$Old Address") thus changing the Skype for Business address as required in the question.
