NEW QUESTION: 1You need to ensure the data integrity of a database by resolving insertion, update, and deletion anomalies.Which term is used to describe this process in relational database design?**A. NormalizationB. ResolutionC. IntegrationD. IsolationAnswer: A**

Explanation:Database normalization is the process of organizing the fields and tables of a relational database to minimize redundancy. Normalization usually involves dividing large tables into smaller (and less redundant) tables and defining relationships between them. The objective is to isolate data so that additions, deletions, and modifications of a field can be made in just one table and then propagated through the rest of the database using the defined relationships.
