You will get the 100% actual questions for the preparation of your E-BW4HANA214 exam.

NEW QUESTION: 1Note: This question is part of a series of questions that use the same or similar answer choices. An answer choice may be correct for more than one question in the series. Each question is independent of the other questions in this series. Information and details provided in a question apply only to that question. Your network contains an Active Directory domain named contoso.com. The domain contains a server named Server1 that runs Windows Server 2016 and a Nano Server named Nano1. Nano1 has two volumes named C and D. You are signed in to Server1. You need to configure Data Deduplication on Nano1. Which tool should you use? **A.** Disk Management **B.** File Server Resource Manager (FSRM) **C.** Server Manager **D.** File Explorer **E.** Shared Folders **F.** Storage Explorer **G.** Computer Management **H.** System Configuration **Answer: C** Explanation: Explanation Either use PowerShell Remoting to Nano1 and use "Enable-DedupVolume" cmdlet, however, there is no such choice for this question; or From Server1, connect its server manager to remotely manage Nano1 and enable Data Deduplication for volumes on Nano1
