NEW QUESTION: 1 DRAG DROP The UploadOrder() method in the UploadCallbackService service is not implementing the callback behavior defined in the IUploadCallBackService interface. You need to modify the class to implement the required callback behavior. What should you do? (To answer, drag the appropriate code segments to the correct location or locations in the answer area. Each code segments may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.) **Answer:** Explanation: Topic 3, Scenario 3 Background You are developing an online bookstore web application that will be used by your company's customers. Technical Requirements General requirements: - The web store application must be an ASP.NET MVC application written in Visual Studio. - The application must connect to a Microsoft SQL database. - The GetTop100Books() method is mission critical and must return data as quickly as possible. It should take advantage of fast, forward-only, read-only methods of reading data. - The ImportBooks() method must keep a copy of the data that can be accessed while new books are being imported without blocking reads. - The Create MonthlyTotalsReport() method must lock the data and prevent others from updating or inserting new rows until complete. - The college textbook area of the web application must get data from a daily updated CSV file. - The children's book area of the web application must get data directly from a local database. It must use a connection string. It must also support access to the stored procedures on the database. Further, it is required to have strongly typed objects. Finally, it will require access to databases from multiple vendors and needs to support more than one-to-one mapping of database tables. - The cookbook functionality is contained within a client-side application that must connect to the server using HTTP and requires access to the data using JavaScript. - The BookApiController class must have a method that is able to perform ad-hoc queries using OData. The RESTful API of the bookstore must expose the following endpoints. Application Structure PurchaseOrders.xml FeaturedBooks.xml

NEW QUESTION: 2 あなたの会社は75 TBのデータをGoogle Cloudに移動しています。Cloud Storageを使用し、Googleが推奨するプラクティスに従ってください。あなたは何をすべきか？
