You can always revise before TDVAN5 exam using our PDF Question answers for TeraData TDVAN5 exam.

**NEW QUESTION: 1** Cisco ISEサーバとADドメインを統合する際の前提条件は何ですか？ **A.**

Cisco ISEサーバとADサーバを同じサブネットに配置します **B.**

Cisco ISEサーバとADサーバのクロックを同期します **C.** 共通DNSサーバーを構成する **D.**

共通の管理者アカウントを構成します **Answer: B** Explanation: The following are the prerequisites to integrate Active Directory with Cisco ISE.+ Use the Network Time Protocol (NTP) server settings to synchronize the time between the Cisco ISE server and Active Directory. You can configure NTP settings from Cisco ISE CLI.+ If your Active Directory structure has multidomain forest or is divided into multiple forests, ensure that trust relationships exist between the domain to which Cisco ISE is connected and the other domains that have user and machine information to which you need access. For more information on establishing trust relationships, refer to Microsoft Active Directory documentation.+ You must have at least one global catalog server operational and accessible by Cisco ISE, in the domain to which you are joining Cisco ISE. **NEW QUESTION: 2** Your network contains two servers that run Windows Server 2012. The servers are members of a failover cluster. Each server has 32 GB of RAM and has the Hyper-V server role installed. Each server hosts three highly available virtual machines. All of the virtual machines have an application named App1 installed. Each of the virtual machines is configured to have 4 GB of memory. During regular business hours, the virtual machines use less than 2 GB of memory. Each night, App1 truncates its logs and uses almost 4 GB of memory. You plan to add another three virtual machines to each host. The new virtual machines will run the same load as the existing virtual machines. You need to ensure that all of the virtual machines can run on one of the Hyper-V hosts if a single host fails. What should you do? **A.** From the properties of each virtual machine, modify the NUMA Configuration - Maximum amount of memory setting. **B.** From the properties of each virtual machine, modify the Smart Paging File Location. **C.** From the properties of each Hyper-V host, modify the Allow virtual machines to span NUMA nodes. **D.** From the properties of each virtual machine, modify the Dynamic Memory settings. **Answer: D**

**NEW QUESTION: 3** A customer who recently implemented Mac OS X Yosemite finds that the laptops have been autonegotiating the authentication protocols when performing RADIUS authentication to Cisco Identity Services Engine. What must the administrator do to statically set the correct settings for the Mac clients? **A.** Select the SSID and change the settings to the desired configuration under Control Panel > Network > Wireless Networks and export to other

machines.**B.** Create a new network profile with the desired settings, using either the Apple iPhone Configuration Utility or Profile Manager and upload to all Mac OS X machines.**C.** Delete the SSID and have the users go through the authentication process again, this time selecting the settings during authentication.**D.** Set the authentication configuration to use the desired settings under the System Preferences > Network > Advanced menu.**Answer: B**
