Note that users will not be able to connect to the report server until you complete the following steps. Log on to the domain controller as domain administrator. Open a Command Prompt window. Copy the following command, replacing placeholder values with actual values that are valid for your network: Setspn -a http/<computer-name>.<domain-name>:<port> <domain-user-account> Run the command. Open the RsReportServer.config file and locate the <AuthenticationTypes> section. Add <RSWindowsNegotiate/> as the first entry in this section to enable NTLM.
RSWindowsNegotiate. If you initially set the Windows service account for the report server to NetworkService or LocalSystem in Reporting Services Configuration Manager, RSWindowsNegotiate is added to the RSReportServer.config file as the default setting. If Kerberos is requested and the authentication fails, the report server switches to NTLM authentication and prompts the user for credentials unless the network is configured to manage authentication transparently.Using RSWindowsNegotiate is your best option because it provides the greatest flexibility for multiple clients in an intranet environment.Not C: IIS is not mention in this scenario.Note: From scenario:/ A single-server deployment of SQL Server 2008 R2 Reporting Services (SSRS) in nativemode is installed on a server named SSRS01.
