Are you preparing for the coming HPE7-M03 exam right now?

NEW QUESTION: 1 You are creating a new portfolio scenario. You are attempting to save it for all users, but the selection is unavailable (grayed out). What is the cause?
A. You have insufficient portfolio security privileges.
B. You have Insufficient project security privileges.
C. You have insufficient user security privileges.
D. You have insufficient global security privileges.
Answer: D
Explanation: Global profiles: Define a user's access to application-wide information and settings, such as the enterprise project structure (EPS), resources, roles, and cost accounts. Each user must be assigned a global profile.
Incorrect answers: B: Project profiles Define a user's access to project-specific information. It is not required that each user be assigned a project profile; however, users cannot access projects unless they are assigned: a project profile, the global profile Admin Superuser, as a resource assignment when they are a project owner, or as a resource assignment when they have Team Member module access.

NEW QUESTION: 2 Match the CSS terms to the corresponding examples. (To answer, drag the appropriate term from the column on the left to its example on the right. Each term may be used once, more than once, or not at all. Each correct match is worth one point.)
Answer:
Explanation:

NEW QUESTION: 3 A. Option C B. Option D C. Option B D. Option A
Answer: D
Explanation: AWS S3 supports client side or server side encryption to encrypt all data at rest. The server side encryption can either have the S3 supplied AES-256 encryption key or the user can send the key along with each API call to supply his own encryption key. The encryption with the user supplied key (SSE-C) does not work with the AWS console. The S3 does not store the keys and the user has to send a key with each request. The SSE-C works when the user has enabled versioning.
