Some are planning to attend exam next month **PRINCE2 Foundation Valid Study Notes** or longer, PRINCE2 Certification exam is supplied by the Prometric testing Service Company.

NEW QUESTION: 1 A user has created a mobile application which makes calls to DynamoDB to fetch certain data. The application is using the DynamoDB SDK and root account access/secret access key to connect to DynamoDB from mobile. Which of the below mentioned statements is true with respect to the best practice for security in this scenario?
A. The user should create an IAM role with DynamoDB and EC2 access. Attach the role with EC2 and route all calls from the mobile through EC2.
B. Create an IAM Role with DynamoDB access and attach it with the mobile application.
C. The user should create a separate IAM user for each mobile application and provide DynamoDB access with it.
D. The application should use an IAM role with web identity federation which validates calls to DynamoDB with identity providers, such as Google, Amazon, and Facebook.
Answer: D
Explanation: With AWS IAM a user is creating an application which runs on an EC2 instance and makes requests to AWS, such as DynamoDB or S3 calls. Here it is recommended that the user should not create an IAM user and pass the user's credentials to the application or embed those credentials inside the application. If the user is creating an app that runs on a mobile phone and makes requests to AWS, the user should not create an IAM user and distribute the user's access key with the app. Instead, he should use an identity provider, such as Login with Amazon, Facebook, or Google to authenticate the users, and then use that identity to get temporary security credentials.

NEW QUESTION: 2 Which system location is used for intercluster Enhanced Location CAC on Cisco Unified Communications Manager?
A. Shadow
B. Default
C. Hub_None
D. Phantom
E. Intercluster
Answer: A
Explanation: The shadow location is used to enable a SIP trunk to pass Enhanced Location CAC information such as location name and Video-Traffic-Class (discussed below), among other things, required for Enhanced Location CAC to function between clusters. In order to pass this location information across clusters, the SIP intercluster trunk (ICT) must be assigned to the "shadow" location. The shadow location cannot have a link to other

locations, and therefore no bandwidth can be reserved between the shadow location and other locations. Any device other than a SIP ICT that is assigned to the shadow location will be treated as if it was associated to Hub_None. That is important to know because if a device other than a SIP ICT ends up in the shadow location, bandwidth deductions will be made from that device as if it were in Hub_None, and that could have varying effects depending on the location and links configuration.

NEW QUESTION: 3 Sharing rules are used to further restrict access defined in the Organization-wide Default settings.**A. True B. False****Answer: B**
