NEW QUESTION: 1You are developing a user callout procedure to send an email to the helpdesk whenever a RAC database instance fails to restart after node failure.Examine these tasks (see exhibit):Identify the minimum steps required, in the correct sequence, to implement this.**A.** 1, 4, 7, **8B.** 1, 3, **7C.** 2, 4, **7D.** 1, 4, **6E.** 2, 4, 7, **8F.** 2, 5, **8Answer: C**Explanation: Explanation/Reference:Explanation:Executables should only have execute permissions for the grid userThe executable files for FAN callouts are stored in the Grid_home/racg/usrco subdirectory. If this subdirectory does not exist in your Grid home, then you must create this directory with the same permissions and ownership as the Grid_home/racg/tmp subdirectory. All executables under \$GRID_HOME/racg/usrco are executed immediately, in an asynchronous fashion, when a FAN event is received through the Oracle Notification Service (ONS). For most event types, the callout is executed on one node in the cluster (the node generating the event), thus a copy of the executable files used by FAN callouts should be available on every node that runs Oracle Clusterware.

NEW QUESTION: 2What is the maximum key size for the RC5 algorithm?**A.** 2040 bits**B.** 256 bits **C.** 1024 bits**D.** 128 bits**Answer: A**Explanation:RC5 is a fast block cipher created by Ron Rivest and analyzed by RSA Data Security, Inc.It is a parameterized algorithm with a variable block size, a variable key size, and a variable number of rounds.Allowable choices for the block size are 32 bits (for experimentation and evaluation purposes only), 64 bits (for use a drop-in replacement for DES), and 128 bits.The number of rounds can range from 0 to 255, while the key can range from 0 bits to 2040 bits in size.Please note that some sources such as the latest Shon Harris book mentions that RC5 maximumkey size is of 2048, not 2040 bits. I would definitively use RSA as the authoritative source whichspecifies a key of 2040 bits. It is an error in Shon's book.The OIG book says:RC5 was developed by Ron Rivest of RSA and is deployed in many of RSA's products. It is a veryadaptable product useful for many applications, ranging from software to hardwareimplementations. The key for RC5 can vary from 0 to 2040 bits, the number of rounds it executescan be adjusted from 0 to 255, and the length of the input words can also be chosen from 16-, 32-,and 64-bit lengths.The following answers were incorrect choices:All of the other answers were wrong.Reference(s) used for this question:Schneiter, Andrew (2013-04-15).
