NEW QUESTION: 1 Which IP SLA operation type is enhanced by the use of the IP SLAs Responder? **A.** DNS **B.** UDP Echo **C.** HTTP **D.** ICMP Echo **Answer: B**
Explanation: Figure 1. UDP Echo Operation
Response time (round-trip time) is computed by measuring the time taken between sending a UDP echo request message from Device B to the destination device--Device A--and receiving a UDP echo reply from Device A. UDP echo accuracy is enhanced by using the IP SLAs Responder at Device A, the destination Cisco device. If the destination device is a Cisco device, then IP SLAs sends a UDP datagram to any port number that you specified. Using the IP SLAs Responder is optional for a UDP echo operation when using Cisco devices. The IP SLAs Responder cannot be configured on non-Cisco devices. Reference:
