C. alerts showing previously installed malware
D. alerts when a file changes disposition
Answer: D
Explanation:

NEW QUESTION: 4While troubleshooting a DHCP relay issue, you run a fw ctl zdebug drop and see the following output:;
[cpu_1];[fw_0];fw_log_drop: Packet proto=17 10.216.14.108:67 > 172.31.2.1:67 dropped by fw_handle_first_packet Reason: fwconn_init_links (INBOUND) failed;

Where 10.216.14.108 is the IP address of the DHCP server and 172.31.2.1 is the VIP of the Cluster. What is the most likely cause of this drop?**A.** An outbound collision due to a Rule Base check, and dropped by incorrectly configuring DHCP in the firewall policy.**B.** An inbound collision due to a connections table check on pre-existing connections.**C.** A link collision due to more than one NAT symbolic link being created for connections returning from the DHCP server back to the VIP of the Cluster.**D.** A link collision due to more than one NAT symbolic link being created for outgoing connections to the DHCP server.**Answer: C**
