NEW QUESTION: 1Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.Your network contains a single Active Directory forest. The forest contains a domain controller and Active Directory Federation Services (AD FS) servers that are deployed to virtual machines. The virtual machines run either on-premises or on Microsoft Azure.You have Azure AD Connect deployed on-premises. The Azure AD Connect database is installed on an on-premises instance of Microsoft SQL Server 2014.Last month, an Azure AD Connect server experienced a hardware failure that caused an Azure AD Connect server to go offline for several days.You need to recommend a solution to reduce the outage window when hardware failure occurs on the Azure AD Connect server.Solution: You deploy a new on-premises Azure AD Connect server that uses the same SQL Server instance. You start Azure AD Connect sync.Does this meet the goal?**A. No****B. Yes****Answer: A**Explanation:An on-premises Azure AD Connect server already exists. A server in staging mode is required to provide High Availability.References:<https://azure.microsoft.com/en-us/documentation/articles/active-directory-aadconnectsync-operations/>
