NEW QUESTION: 1 Universal Containers has created a Discount Schedule with the override Behavior set to All Tiers and applied it to a Product. A sales rep then adds this Product to a Quote, manually changes the discount percent of a discount Tier, and saves the Quote. At what point during the sales process can the sales rep be assured that the override amount will be unaffected by changes the Admin may make to the original Discount Schedule? **A.** Override values are subject to Discount Schedule updates made by the Admin. **B.** The Opportunity status has changed to Proposal/price Quote. **C.** The Quote status has changed to Approved. **D.** The Save or Quick Save buttons are clicked. **Answer: D**

NEW QUESTION: 2

```
resource "aws_s3_bucket" "example" { bucket = "my-test-s3-terraform-bucket" ... } resource "aws_iam_role" "test_role" { name = "test_role" ... }
```

 Due to the way that the application code is written , the s3 bucket must be created before the test role is created , otherwise there will be a problem. How can you ensure that? **A.** This is not possible to control in terraform . Terraform will take care of it in a native way , and create a dependency graph that is best suited for the parallel resource creation. **B.** This will already be taken care of by terraform native implicit dependency. Nothing else needs to be done from your end. **C.** Create 2 separate terraform config scripts , and run them one by one , 1 for s3 bucket , and another for IAM role , run the S3 bucket script first. **D.** Add explicit dependency using `depends_on` . This will ensure the correct order of resource creation. **Answer: D**
Explanation: Explanation Use the `depends_on` meta-argument to handle hidden resource dependencies that Terraform can't automatically infer. Explicitly specifying a dependency is only necessary when a resource relies on some other resource's behavior but doesn't access any of that resource's data in its arguments.

NEW QUESTION: 3 Several requirements have been elicited in a project. One of them specifies the need for the system to download overnight, to a central repository, all the transactions made during the day in the remote offices. The project team is not sure that this is technically possible. What might help them to analyse this requirement? **A.** Prototype. **B.** Scenario analysis. **C.** Structured walkthrough. **D.** Requirements catalogue. **Answer: A**

NEW QUESTION: 4 Which of the following can optimization problem be classified according to the constraints? (Multiple choice) **A.** Semi-constraint conditions **B.** Inequality constraints **C.** Unconstrained conditions **D.** equality constraints **Answer: B,C,D**
