NEW QUESTION: 3 Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution. After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.
You have a Microsoft SharePoint Server 2019 farm that contains multiple provider-hosted add-ins and a Workflow Manager farm. You run the SharePoint Hybrid Configuration Wizard. Users report that the add-ins and the workflows fail. You need to resolve the issue as quickly as possible.
Solution: From the SharePoint 2019 Management Shell, you update the realms for the provider-hosted add-ins and the Workflow Manager. Does this meet the goal?
A. No
B. Yes
Answer: B
Explanation: SharePoint Add-ins are associated with SPTrustedSecurityTokenIssuers using the IssuerId and on request it tries to get a token from the Secure Token issuer (STS). The token issuers are tied to the authentication realm and once the realm is changed, the SharePoint Add-ins can no longer authenticate successfully. The trustedtokenissuer with the correct IssuerId still exists in the farm but it is associated with the previous authentication realm.
